QAQC Quantile Flag Check

#### Overview

#### Purpose

The purpose of the indicator quantiles is to flag records that are "unusual" relative to all of the data in the DDI for a given indicator in order to facilitate QA/QC. They are not used to filter any of the data for SEACAR analyses, and the presence of a LowerQuantile or UpperQuantile flag on a DDI record alone does not necessarily indicate there is any issue with the record (neither does the absence of a LowerQuantile or UpperQuantile flag necessarily mean that a data record is correct).

#### Relevant file locations

Current values can be found in the "LowQuantile" and "HighQuantile" columns of the "Ref\_Parameters" worksheet.

The R script described below and the output file can be found in the *FloridaSEACAR IndicatorQuantiles* repository on GitHub:

 $\bullet \ \ https://github.com/FloridaSEACAR/IndicatorQuantiles$ 

#### Process steps

#### $IQ\_Report\_Render.R \ \& \ IQ\_Report.Rmd$

- 1. The *IQ\_Report\_Render.R* script lists all files in a given directory and filters it to a list of DDI exports to evaluate considering a list of parameters to skip (user-defined).
- 2. User sets the desired upper and lower quantile thresholds, as well as a number of standard deviations away from the mean to use for the calculations.
- 3. User sets the string value(s) in the DDI exports that should be considered as NA values.
- 4. The remainder of the script loops through the file list, returning the values listed below and binding them together by row into a single Excel spreadsheet that is saved to the User's working directory.
- 5. For each habitat included in the User's working directory a PDF report will be created in the "output" folder using  $IQ\_Report.Rmd$ , which provides an overview of questionable / flagged values.
- 6. In addition to the PDF reports, each habitat will provide a .txt data output file in the "output/data" folder containing questionable values.

# Summary

The following quantile thresholds are used for flagging "questionable" values:

Lower quantile: 0.001Upper quantile: 0.999

The following parameters are being excluded from this analysis:

#### Included Indicators and Parameters and the files used in this analysis:

 $All\_CW\_Parameters \hbox{--} 2024 \hbox{--} Jun \hbox{--} 06.txt$ 

Indicator: Species Compositon

- Percent Cover
- Stem Density
- Total/Canopy Percent Cover

### **Summary Tables**

q\_low: Value corresponding to the qval\_low quantile for the parameter in the DDI export.

q\_high: Value corresponding to the qval\_high quantile for the parameter in the DDI export.

mean: Mean value for the parameter in the DDI export.

 $n\_tot$ : Total number of records in the DDI export for the parameter.

 $n_q$  low: Number of records in the DDI export that are below q\_low for the parameter.

 $n_q$ high: Number of records in the DDI export that are above q\_high for the parameter.

pct\_flagged: Proportion of total records in the DDI export for the parameter which have been flagged as above q\_high, or below q\_low.

Indicator: Species Compositon

Table 1: Indicator Quantile Overview

ParameterName	q low	q high	mean	n tot	n q low	n q high	pct flagged
Percent Cover	0	100.00	14.37	9993	0	0	0.00
Stem Density	0	4947.10	466.06	1844	0	2	0.11
Total/Canopy Percent Cover	0	103.22	43.51	150	0	0	0.00

# Low Quantile

**Indicator: Species Compositon** 

There are no Low Quantile Flagged Values for Percent Cover

There are no Low Quantile Flagged Values for Stem Density

There are no Low Quantile Flagged Values for Total/Canopy Percent Cover

# High Quantile

## **Indicator: Species Compositon**

There are no High Quantile Flagged Values for Percent Cover

#### **Stem Density**

Table 2: Flagged Values - High Indicator Quantile:  ${\bf 4947.1}$ 

RowID	ProgramID	ProgramLocationID	SampleDate	ResultValue
37456	0000	PC2-2	2014-11-04	5800
37916		PC3-3	2014-11-04	5200

# Programs containing flagged data:

5009- Apalachicola Emergent Marsh Vegetation Monitoring

There are no High Quantile Flagged Values for Total/Canopy Percent Cover

## QAQC Quantile Flag Check

- n\_high is the amount of data above the quantile value.
- n\_high\_flagged is the amount of data above the quantile value AND containing proper SEACAR-QAQCFlag of 17Q (ResultValue above quantile value).
- n\_low is the amount of data below the quantile value.
- n\_low\_flagged is the amount of data below the quantile value AND containing proper SEACAR-QAQCFlag of 16Q (Result Value below quantile value).
- If everything is in order, these values should be the same. Any discrepancies therein should be fastidiously noted.

ParameterName	n high	n high flagged	n low	n low flagged
Stem Density	2	2	0	0
